Power Generation  
Recreational Equipment  
Foundries  
Forging Houses

## Employee Commitment

Friendly  
Experienced  
Helpful  
Willing  
Knowledgeable

## History

*Anderson Laboratories, Inc.* was founded in 1939 as a full service materials testing laboratory. We began with a few employees as an internal foundry laboratory performing chemical analysis, mechanical properties testing, and the verification of heat treat conditions of components.

During World War II, Anderson Laboratories, Inc. serviced the United States Armed Forces in the war effort. A continued emphasis to support the growing climate of post war products is how our company's identity took shape. A relentless dedication to manufacturers of the United States, Canada, and Europe to support their service needs continued to be our endeavor through the next forty years embracing new testing technologies as they emerged.

As our company continued to grow we relocated to the current location in 1984. The move was done to be able to keep up with our evolving customer requirements, new customers, and volumes. The new facility allowed us to greatly expand our capabilities and production abilities.

With the turning of the millennium Anderson Laboratories, Inc. continued to reinvest and replace some of the older technologies and evolve into the customer focused organization that we are today. Our customers have always been and will continue to be our number one priority.

If you have any questions regarding the services we offer, please contact us at our laboratory in Greendale, Wisconsin.
